

How to configure and save your Blancco Cloud (or Management Console) credentials to Drive Eraser ISO image

Created date	Updated date	Affects version	Fix version
12 Dec 2017	13 Feb 2023		

On default settings, Blancco Drive Eraser is not configured to use any specific user credentials when consuming licenses from Blancco Management Console/Blancco Cloud. Instead, user credentials are prompted from the user when the erasure is started. After the user enters a username and password, licenses will be consumed from the corresponding user.

For some scenarios this is not optimal process and there is a need to save the credentials to Drive Eraser ISO image to prevent users from entering them in the beginning of each erasure session.

This can be done by configuring the Blancco Drive Eraser ISO image with [Configuration Tool](#).

1. Load your Blancco Drive Eraser ISO image to the Configuration Tool ([Download: Blancco Drive Eraser Image Configuration Tool](#))
2. Navigate to "Communication"-tab
3. Enter Management Console/Blancco Cloud communication details in the fields accordingly
 - a. Hostname/IP: The hostname or IP address of your Management Console server
 - i. If you are using Blancco Cloud hostname needs to be *cloud.blancco.com*
 - b. Port: Communication port used with your Management Console
 - i. The default port used by Management Console is *8443*
 - ii. If you are using Blancco Cloud port needs to be *443*
 - c. Username and password: Enter your Management Console/Blancco Cloud user credentials
4. After entering the credentials, click "Save" button
5. Save the ISO image by clicking "Save as" button
6. Make sure the configured ISO is used when booting the software (e.g. recreate bootable USB-stick, burn CD or updated your PXE booting server to use the configured ISO image)
