Blancco Management Console version 5.17.1 has been released!

Features:

- SSL ciphers.
    - New secure ciphers added.
    - Removed insecure ciphers.
- Login OPTIONS in HTTP response.
    - Disabled dangerous options & methods on the server (e.g. PATCH).
- Restrict concurrent sessions to one.
    - For example, users can't log in twice from two different browsers, computers, or in incognito and standard mode.
- Inadequate session time out for process management tab.
    - Session timeout is now configurable.
- Updated Apache Tomcat to V. 9.0.85

Bug fixes:

- **MC-7327** - An adversary can exploit the known flaws of any 3rd party API used in the application (reporting framework, etc)
- **MC-7352** - Failed to sign up to Blancco Cloud.
- **MC-7353** - Not able to save changes to workflow with BMC v5.17.0 using MS SQL server.
