How I can verify Blancco ISO image integrity?

Created date	Updated date	Affects version	Fix version
27 Aug 2017	25 Aug 2023	N/A	N/A

Once the download has completed, a checksum tool should be used to verify the SHA256 checksum shown on the download page with the value calculated from the ISO image. A freely available checksum tool, such as MD5 & SHA Checksum Utility, can be used for this verification.

Checksum can be also calculated with Powershell by using "Get-FileHash" command.

If the checksums don't match please submit an issue ticket at the Blancco support portal.
