

Blanco Management Console version 5.11.4 has been released!

Management Console 5.11.4 - Release notes

Fixes:

- **MC-6851** - Update log4j to 2.17.1.
 - Standalone MC would be prone to attack when connected to the Internet. Hence, MC versions < than 5.11.4 would all need an upgrade to MC 5.11.4 which has Apache Log4J2 libraries updated.
 - The latest version is 2.17.1 which fixes the vulnerability even better than 2.17.0 did.

Known issues:

- **MC-6805** - Occasional "MC connection error: Internal Server Error" on DE side when starting remote workflow from MC.
 - The bug manifests when:
 - Session reuse is in use.
 - Remote workflow is launched.
 - BDE session restarts before MC sends the workflow to BDE.
- **MC-6821** - "Test connection" for email configuration fails when using secondary admin.
- **MC-6816** - Workflow status column filter does not display any data.
