

# Blancco Mobile Device Eraser 3.4 is now released!

- iPhone X support.
  - We now have iPhone X support for both erasure as well as for diagnostics.
- Web browser.
  - A fully featured web browser has been added. Press Ctrl-W to open it.
  - Good if you need to jump between the erasure and an asset management system on the same machine.
  - The feature can be enabled in administrator settings before the login, together with settings for the web browser.
  - Administrator can block unwanted browsing and limit it to a certain address.
- Update process improved.
  - The automatic update has been improved with more options.
  - Administrators can now force installation of new version.
- Predefined answers in workflows.
  - Workflows can now have a question that is answered by predefined answers. For example, grading.
- Timeout setting for Diagnostics tests.
  - The timeout for the diagnostic tests can now be configured.
  - This can help speed up the processes of diagnostics.
- Improved license consumption.
  - In environments with slow connection to BMC/ Cloud user can select to cache licenses to the client.
  - That means one request to the server will download a selected amount of licenses at once and no need to connect to server until these licenses are consumed.
- Workflow improvements.
  - Added functionality and stability fixes for the workflows.
