Blancco Mobile Device Eraser 3.5 is now released!

Mobile Device Eraser 3.5 - Release notes

- Android Bypass Reset.
  - Ability to reset newer Samsung devices without need to enabling USB Debugging first.
- Android Factory Reset without verification.
  - Start a factory reset on an Android device without waiting to see if it worked or not. Could be good in start or in the end of a workflow.
- Untethered diagnostics.
  - Possibility to disconnect the device after installation of diagnostics app is completed.
  - Device needs to be plugged in again to upload the report.
  - Untethered means without cable.
- Centralized Settings.
  - Create a server that stores all the settings, clients can connect to the server and get the settings from one point.
  - Create master template for users to either force settings that users cannot change or update all users at once.
  - You still have opportunity to have local users if you prefer that. The template will not effect these.
- Thunderbolt support.
  - Thunderbolt gives possibility to scale the number of devices without affecting the performance.
  - 32 devices will have the same speed as 1 device.
  - With USB we can see decrease in performance already after 3 connected devices.
- Zebra ZM400 support.
  - Support for the ZM400 label printer added.
- Web browser improvements.
  - The integrated web browser has been upgraded to a full featured web browser with all support you expect from a web browser today like HTML5 support.
- Better hardware support.
  - The underlaying operating system have been upgraded to provide better support for new hardware.
- New graphical engine.
  - Has been upgraded to a new version.
  - Enables faster and better UI.
- iOS synchronisation and iOS firmware download settings have been moved to the login page settings under the Synchronisation Service -tab
