Blancco Mobile Device Eraser 3.6 is now released!

Mobile Device Eraser 3.6 - Release notes

- Deployment ISO creation tool.
  - A creation tool for pre-configured installation images is added.
  - If you run in Standalone mode you can make a copy of the environment you currently have.
  - If you run in Server mode you can both clone the server machine and create pre-configured client images that automatically will connect to the server.
- Control client version with sync server.
  - When using the sync server functionality, administrator can select which version of BMDE the clients should use.
  - All clients can be updated automatically.
- Blacklist viewer.
  - Easily see non-supported devices in the UI.
- Workflow templates.
  - Installation comes with 3 predefined template workflows.
    - They show how you can use workflows for erasure, diagnostics and grading.
- Execute a workflow from a workflow.
  - A workflow can be used as a part of one or more other workflows.
- Android: SD card detection.
  - The software will detect and warn if a SD card is present in Android device.
- Automatic power off after iOS download completed.
  - The client machine can automatically power off after finalizing the download.
