

Java JMX RMI accessible on Blancco Management Console server

Created date	Updated date	Affects version	Fix version
27 Jan 2020	25 Feb 2020	Management Console 5.2.0 and older	Management Console 5.3.0

Problem

When checking the vulnerabilities of the Blancco Management Console server some scanners may highlight that the remote access to JMX RMI is enabled.

Cause

On Blancco Management Console 5.2.0 (and older), by default the remote access of JMX RMI is disabled but the port is open.

Resolution

Starting with Management Console version 5.3.0 the port is closed and security scanners should no longer claim this as a vulnerability.

If current Management Console version is older than 5.3.0, it is recommended to update the software to a newer version where Java JMX RMI port is closed.
