# How is the overall result of diagnostics determined?

The result of diagnostics can be seen in the report and also in the Reports view in Blancco Mobile Erasure and Diagnostics. The result is constructed with the following logic:

- PASSED (if all run tests are successful or if all run tests ok)
- FAILED (if one or more from the run tests are not successful, or the whole diagnostics was not possible)
- NOT PERFORMED (none of the tests were run)

Note that overall test result is not affected by "Not available" test results.
