

What are the average erasure times for Android and iOS devices?

Android erasure times are the following:

- 32GB device, 1 pass overwriting: 10-15 mins
- 128GB device, 1 pass overwriting: 25-45 mins

Modern high-end devices are typically erased much faster than older and lower-end devices. If several overwriting passes are used (for example NSA 130-1 with 3 passes), the erasure time will increase accordingly.

iOS erasure takes 3-15 minutes ([if no firmware downloading is needed](#)). If overwriting is used in addition to iOS firmware update, the erasure time will increase.
