Drive Eraser Configuration Tool version 2.1.1 has been released!

Improvements:

- "Fail erasure if not supported" setting in Security-tab.
  - When enabled, erasure will fail if drive doesn't support remapped sectors erasure. This replaces "Prevent erasure if not supported" setting, which was available in older versions.
- Increase the maximum value for the MC communication timeout.
  - It is possible to increase the timeout to 10 minutes (600 seconds). Previously the maximum value was 2 minutes (120 seconds).
