Blancco Management Console version 4.1.2 has been released!

Management Console 4.1.2 - Release notes:

Bug fix:

- Fixed an issue when a custom field, whose name ends in a period, is edited by the user the custom field name was unexpectedly changed to remove the period. This meant that the custom field was no longer available under the previous name for the particular report.
    - **NOTE: For customers affected by this issue.** When having edited the value of a custom field containing a period in 4.1.0, the issue will still persist when viewing those reports in 4.1.2. This occurs because the edited report xml in the database still contains the custom field without the period. The only way to remedy the issue is to re-edit the custom field value. This makes the period visible in all such custom fields in the report.
