Blancco Management Console version 4.2.2 has been released!

Management Console 4.2.2 - Release notes

- All non-legacy reports can be imported via a new report API: https://MC/api/reports/import
  - Upload status and any license consumption details are returned – for example when importing full standalone reports. This will allow for fully automated import of loose erasure reports.
  - Further details can be found at: https://itsupport.blancco.com/mcapi/#!/Report_API/post_api_reports_import
- Extended logging is added in the case of failed report importing. Logs will include failed erasure reports, along with details on the user trying to import reports.
  - This will help to quickly identify any issues that may be present in the report import process.
