

# Blancco Mobile Diagnostics and Erasure 4.4.2 is now released!

Mobile Diagnostics and Erasure 4.4.2 - Release notes

## Features:

- **PHEN-5353** - Notification About Missing Workflow Resources.
  - When workflow is imported from USB storage or MC, BMDE now checks to see if all the resources that the workflow needs are present on the system.
  - If there are missing resources a warning icon will appear, and the user can hover the pointer over the icon for related information.
- **PHEN-4997** - Add M-model Number in Sheet-mode View.
  - "M-model" field is now included in sheet-mode view.
- **PHEN-4726** - Allow Minimizing/Closing Pop-ups for Removed Devices.
  - Sometimes the "Device Connected" popup will stay visible, blocking the UI, after the device has been already removed.
  - Users are now able to minimize or close the pop-up.
- **PHEN-5379** - Fake Android Detection Improvement.
  - "Fake" Android icon has been added to the UI.

## Fixes:

- **PHEN-5630** - iOS erasure consistently fails when proxy enabled.
- **PHEN-5665** - iPhones stuck at 4%.
- **PHEN-5016** - Sim detection issues.
- **PHEN-5416** - Motorola E6 Plus fails to process "fake" detection.
- **PHEN-5451** - During uninstalling stress test, handset automatically reinstall blancco without uploading result.
- **PHEN-5486** - Custom fields from previous report appends to the next report/reports.
- **PHEN-5628** - MDM lock detection issues.
- **PHEN-3525** - Android Disk capacity displayed incorrectly.
- **PHEN-3809** - LG K8 internal memory not shown correct.
- **PHEN-4388** - Nokia - Issue reporting storage space.
- **PHEN-5488** - Recipero Blocked Check Fails Due Diligence, Pass LSB.
- **PHEN-5619** - iOS Setup only works on second try.
- **PHEN-5624** - MDM lock.
- **PHEN-5648** - Blancco Machines Stop Printing Issue.

## Known issues:

- Sync server's firmware server sometimes fails to generate tracking file when erasure process gets stalled.
- Erasure view is slow when there are firmware downloads ongoing (e.g. switch between the views)
- On client station update notification of new BMDE version was received via OTA update. Version expected to be shared only by the server station.
- Device identifier popup gets displayed even after device mandatory popups/identifier settings are removed.
- Samsung S4 active devices stay rebooting after final FR, device gets erased after cable is reconnected.
- The following are still valid from previous rounds:
  - With certain system setups Blancco background image at boot is still missing (gray screen shown instead).
  - Functional tests queued for Android OS 10 devices.
  - It's known issue that iOS Parts main level status is unknown for older iOS devices though serials are found.
  - Also, as iOS Parts information list varies between devices there's still enhancements needed to make listing more consistent.
  - Sync server's printer template editor GUI requires small enhancements which should be fixed in later releases.
