

# Blanco Management Console version 5.11.1 has been released!

Management Console 5.11.1 - Release notes

## Bug fixes:

- **MC-6834** - Log4Shell vulnerability fix.
  - Standalone MC would be prone to attack when connected to the Internet. Hence, MC versions < than 5.11.1 would all need an upgrade to MC 5.11.1 which has Apache Log4J2 libraries updated.
  - More details can be found from [CVE-2021-44228 - Critical vulnerability in Apache Log4j library](#)

## Known issues:

- **MC-6805** - Occasional "MC connection error: Internal Server Error" on Drive Eraser side when starting remote workflow from MC.
  - The bug manifests when:
    - Session reuse is in use.
    - Remote workflow is launched.
    - BDE session restarts before MC sends the workflow to BDE.
- **MC-6821** - "Test connection" for email configuration fails when using secondary admin.
- **MC-6816** - Workflow status column filter does not display any data.
