

# Blanco Network Device Eraser 2.6 is now released!

## Network Device Eraser 2.6 - Release Notes

### Features:

- UI/UX enhancements.
  - Used BDE UI library.
  - Used BDE design elements – colors, buttons, background, alignment, tooltips, and popups.
- Ping test functionality in settings.
  - Ping test to check cloud, FTP and TFTP connections.
- Serial number missing warning.
  - Alerts user on home page that serial number is missing.
  - User can add serial number in custom fields.

### Bug fixes:

- Communication with the device failed.
  - Kickstart image was missing.
- **BNDE-734** - ASA5525 failed due to IP assignment with NIST Purge.

### Known issues:

- **BNDE-700** - Sometimes after performing NIST Purge FO (with Auto Load) the overwritten files remain on the device.
  - Device: N3k4180YC (NX-OS)
- **BNDE-758** - Loading OS works but ping button displays as "IP is being used".
  - Ping test should show IP as already assigned.
