Can I run Blancco Erasure Software in Windows?

The "default version" of Blancco Drive Eraser (CD/ISO image) cannot be executed from Windows. Windows-based Blancco Drive Eraser execution requires that the software is "packaged" into an MSI package.

Blancco Drive Eraser uses its own operating system. This means that the software needs to be booted from a bootable media device (CD/DVD/USB) during the computer startup.

Blancco offers other Windows based solutions such as Blancco File Eraser, Blancco Removable Media Eraser and Blancco LUN Eraser. For more information, visit our official web site.
